

AI Engineer Career Roadmap

Personalized 3-Month Strategic Plan

Prepared by: Elite AI Career Strategist

CONFIDENTIAL • 1-PAGE BRIEF

▲ CURRENT POSITION Working Professional — Full-Stack JS Developer Skills: JavaScript, React, Node.js	◆ TARGET GOAL Become an AI Engineer Timeline: 3 months (aggressive, execution-first)	★ KEY ADVANTAGE Production engineering skills transfer directly to shipping AI-powered apps — you skip "how to code" and go straight to "how to build with AI."
---	---	---

▲ Skill Gap Analysis

Category	You Have	You Need	Priority
Core Language	JavaScript (strong)	Python (NumPy, Pandas)	Critical
AI/ML Foundations	None yet	LLM basics, embeddings, vector search, prompt engineering	Critical
AI Tooling	REST APIs (Node.js)	OpenAI/Anthropic APIs, LangChain / LlamaIndex, RAG pipelines	High
Data & Infra	Node backend design	Vector DBs (Pinecone/Chroma), basic ML deployment (FastAPI, Docker)	Medium
Applied Product	React front-end	Building AI-native UX (streaming, agents, chat interfaces)	Medium

⚙ Recommended Learning Plan

Weeks	Focus
1–2	Python fundamentals + NumPy/Pandas for JS devs (fast-track course)
3–4	LLM foundations: tokens, embeddings, context windows, prompt engineering
5–6	Anthropic/OpenAI APIs + LangChain; build first RAG pipeline
7–8	Vector databases, semantic search, agentic workflows
9–10	FastAPI + Docker deployment; connect AI backend to React front-end
11–12	Portfolio polish, mock interviews, applications

■ Suggested Projects

- 1. AI Chat App (Full-Stack)**

React + Node.js frontend, Python/FastAPI AI backend, streaming Claude/OpenAI responses.
- 2. RAG Knowledge Assistant**

Upload docs → embeddings → vector DB → chat Q&A over your own data.
- 3. AI Agent Automation Tool**

Multi-step agent using tool-calling to automate a real workflow (e.g., email triage).
- 4. Open-Source Contribution**

Contribute to a LangChain/LlamaIndex-style repo — signals credibility to employers.

● Networking Strategy

- Post weekly build-in-public updates on LinkedIn/X documenting your AI projects (leverages your dev background as proof of execution)
- Join 2–3 active AI engineering communities (e.g., MLOps community, local AI meetups, Discord servers for LangChain/Anthropic devs)
- Reach out to 5 AI Engineers/week for 15-min informational chats — ask about their transition path, not for a job
- Attend or speak at one AI meetup/hackathon before month 3 to build visible momentum

📅 Monthly Milestones

Month 1 — Foundations • Python + ML/LLM basics complete • First API integration project shipped • LinkedIn AI-journey posts started	Month 2 — Build & Apply • RAG app + agent project live on GitHub • 10+ networking conversations done • Resume/portfolio repositioned for AI roles	Month 3 — Launch • Portfolio of 3–4 AI projects finalized • Actively applying + interviewing • Open-source contribution merged
---	---	--

- ▶ **Immediate Next Actions**

1. Enroll in a fast-track Python course this week

2. Set up OpenAI/Anthropic API keys and run first API call

3. Create a public GitHub repo: "ai-engineer-journey"

4. Write and publish your first "why I'm becoming an AI Engineer" LinkedIn post

5. Block 10 hrs/week non-negotiable learning time on your calendar

6. Identify and message 3 AI engineers for a networking chat
